

The mother explaining how their lives are so different thanks to the project

PHOTO STORY

One of the families we met have seen a complete change in their circumstances since joining the micro loan programme and training.

They have gone from being listed as poor in the community to breeding pigs, planting various crops and having their own bio gas source (using animal waste to generate clean cooking gas).

Helping the neighbours instal a bio gas unit

Growing green tea, a speciality of the region

Clean and hygienic pig pens

The kitchen before and after installing bio gas
